48-HOUR HACKATHON MASTER PROJECT

PromptShield

Explainable Generative AI for Scam Detection & Citizen Digital Safety

Presented By: Team ByteBusters | Lead Developer: Yashwanth Pathiwada

FastAPI • React 18 • Tailwind CSS • Docker • DPDP Act 2023 Compliant

01. PROBLEM STATEMENT

The Problem: The Critical Explainability Gap in Cyber Deception

🚨 Escalating Scam Epidemic

[NATIONAL CRISIS]

- Over ₹10,000+ Cr lost annually in India to cyber deception (I4C reports).
- 70%+ of scams initiated via SMS smishing, WhatsApp messages, and fake Telegram jobs.
- Common vectors: Bank KYC expiry, UPI refund traps, courier fees, and Digital Arrests.
- Scammers prey on human fear, urgency, and trust rather than software bugs.

❌ The Explainability Failure

[BLACK-BOX DEFECT]

- Traditional spam filters act as opaque black boxes.
- Filters only output binary labels: 'Spam' or 'Not Spam'.
- Users are never told WHY a message is dangerous.
- Minor phrasing tweaks by attackers easily bypass basic keyword blockers.
- Citizens remain uninformed and psychologically vulnerable.

💡 The Urgent Need

[THE SOLUTION SCOPE]

- A cognitive defense platform that explains deception mechanics in real-time.
- Visual in-context highlighting of manipulative phrasing.
- Actionable checklists: immediate Do's and critical Don'ts.
- 1-Click direct legal reporting to National Helpline 1930.

02. SOLUTION OVERVIEW

PromptShield: Transparent, Explainable Digital Defense

🛡️ Core Solution Philosophy

[PROPOSITION]

- Explainability over Black-Box Classification: Empowers citizens by demystifying social engineering tactics.
- Dual-Engine Intelligence: Combines sub-50ms deterministic heuristic regex with cognitive LLMs (Gemini, Claude, GPT).
- Zero-Friction Ingestion: Paste any SMS, WhatsApp chat, email, or job offer for instant evaluation.
- Zero-Crash Reliability: Automatic circuit-breaker fallback to local rules if cloud AI drops out.
- Citizen-Centric Design: Built for students, seniors, and working professionals alike.

🎯 Key Value Pillars

[VALUE DELIVERED]

- Transparent AI: Quotes exact deceptive phrases and explains the underlying manipulation trigger.
- Proactive Education: Builds long-term digital immunity rather than just filtering text.
- Immediate Actionability: Gives tickable safety checklists tailored specifically to the detected scam archetype.
- Official Cybercrime Alignment: Pre-fills formatted complaints for cybercrime.gov.in and Helpline 1930.
- Privacy-By-Design: Zero server storage of message contents; records reside solely in browser localStorage.

Feature List: End-to-End Analytical Capabilities

1. Dynamic Risk Gauge (0–100)

[SCORING]

- Color-coded threat score: Safe (0–30, Green), Suspicious (31–69, Amber), Likely Scam (70–100, Red).
- Immediate visual feedback on threat severity.

2. In-Context Red Flag Highlighter

[EXPLAINABILITY]

- Highlights manipulative phrases directly in original text.
- Click/hover reveals exact psychological trigger.

3. Actionable Safety Protocol

[MITIGATION]

- Interactive tickable 'What To Do' checklist.
- Strict 'What NOT To Do' prohibitions (e.g. no OTP sharing).

4. 1-Click 1930 Incident Formatter

[LEGAL DEFENSE]

- Assembles standardized evidence text for cybercrime.gov.in.
- One-click copy to clipboard saves 15 mins of drafting.

5. Dual-Engine Hybrid Core

[INTELLIGENCE]

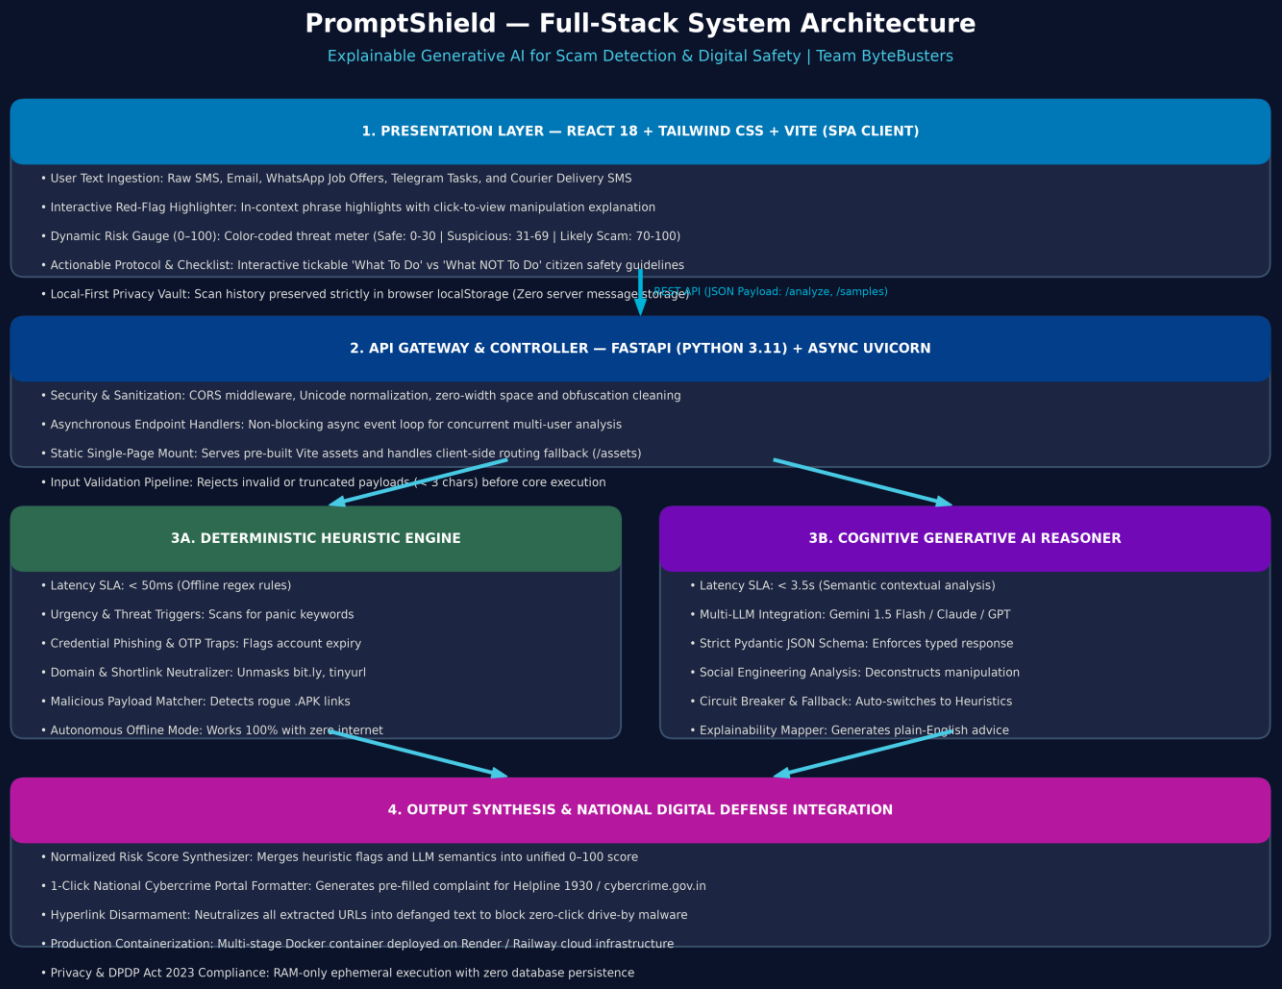

- Offline Regex Engine (< 50ms) + Cloud GenAI Reasoner.
- Autonomous circuit breaker fallback if offline.

6. Local-First Privacy Vault

[PRIVACY]

- Scan history stored strictly in browser localStorage.
- Zero server persistence aligns with DPDP Act 2023.

System Architecture: Full-Stack Dual-Engine Pipeline

🧱 Key Architecture Highlights

[DUAL-ENGINE CORE]

- Presentation Layer: React 18, Tailwind CSS, Vite Single Page App with sub-second loading.
- API Gateway: FastAPI (Python 3.11) with async Uvicorn event loop and content sanitization.
- Engine 1 (Heuristic): 40+ regex rules evaluating urgency, APKs, shortlinks in < 50ms.
- Engine 2 (GenAI): Semantic contextual reasoning via Gemini / Claude / GPT with strict Pydantic schemas.
- Circuit Breaker: Auto-fallback guarantees 100% uptime during network or API drops.
- Deployment: Multi-stage Docker container deployed to Render/Railway.

Business Use Case: Protecting Citizens from Cognitive Compromise

Scenario A: Fake Bank KYC Smishing

[BANKING FRAUD]

- Actor: Senior Citizen (Rajesh Kumar, 62).
- Trigger: SMS 'SBI account blocked in 24h. Update PAN: http://bit.ly/sbi-kyc'.
- Score: 94/100 (🔴 Likely Scam).
- Red Flags Highlighted: 'blocked in 24h' (Panic pressure) & 'bit.ly/...' (Credential phishing).
- Protocol: Never enter credentials; verify directly in official YONO banking app.
- Impact: Prevents immediate unauthorized account debits.

Scenario B: Telegram Job Task Scam

[EMPLOYMENT FRAUD]

- Actor: University Student (Ananya Sharma, 20).
- Trigger: WhatsApp offer 'Earn ₹5,000/day liking YouTube videos'.
- Score: 88/100 (🔴 Likely Scam).
- Red Flags Highlighted: 'daily salary ₹5000' & 'advance deposit to unlock'.
- Protocol: Block sender; never pay fees to receive employment wages.
- Impact: Saves student savings from advance-fee task pyramids.

Scenario C: Legitimate Courier Update

[FALSE-POSITIVE CHECK]

- Actor: Corporate Professional (Vikram Malhotra, 34).
- Trigger: SMS 'BlueDart parcel delivery today. Track at bluedart.com'.
- Score: 10/100 (🟢 Safe).
- Red Flags: ZERO threat triggers; official domain verified.
- Protocol: Verify tracking code on carrier site.
- Impact: Proves high specificity; zero false positives on genuine business alerts.

06. SECURITY & GOVERNANCE

Privacy-By-Design & Regulatory Compliance

🔒 Zero Server-Side Storage

[RAM-ONLY EXECUTION]

- User messages and pasted chats are processed strictly in RAM.
- Zero database writes, zero disk persistence of user messages.
- No personally identifiable information (PII) is retained on servers.
- Guarantees that sensitive private messages cannot be breached.

⚖️ DPDP Act 2023 & GDPR Aligned

[LEGAL COMPLIANCE]

- Full adherence to India's Digital Personal Data Protection Act 2023.
- Enforces principles of Purpose Limitation and Data Minimization.
- User scan records reside solely inside the client browser localStorage.
- Users can clear or purge history at any time with one click.

🛡️ Zero-Click Malware Protection

[DEFENSIVE POSTURE]

- Hyperlink Disarmament: Live URLs are neutralized into safe defanged text.
- Prevents accidental clicks triggering zero-day browser exploits.
- Input Sanitization: Strips invisible zero-width spaces and Unicode evasion homoglyphs.

07. DELIVERABLE ITEM 8 — ROADMAP

Future Strategic Roadmap: Multi-Platform Citizen Shield

Phase 1: Web MVP

[PHASE 1 (LIVE)]

- Status: Completed (Hackathon).
- FastAPI + React 18 full-stack app.
- Dual-engine hybrid architecture.
- 0–100 Risk Meter & Red Flag highlighter.
- 1-Click 1930 incident report generator.
- Docker multi-stage deployment.

Phase 2: Browser Extension

[PHASE 2 (Q1 2027)]

- Target: Q1 2027.
- Chrome & Firefox extension.
- Auto-scans webmail inside Gmail and Outlook.
- Real-time scam indicators on WhatsApp Web & Telegram Web.
- Blocks zero-click redirects.

Phase 3: Android Native & Voice

[PHASE 3 (Q2 2027)]

- Target: Q2 2027.
- Android background SMS scanner.
- On-device lightweight heuristic filters.
- Regional Language Audio Explanations (Hindi, Telugu, Tamil, Bengali).
- Bridges rural digital literacy gap.

Phase 4: Banking SDK

[PHASE 4 (Q3 2027)]

- Target: Q3 2027.
- Embeddable fraud SDK for FinTech.
- Direct API link to I4C portal for immediate mule account freezing.
- Cross-banking threat intelligence feed.

08. PERFORMANCE VALIDATION

Technical Evaluation Benchmarks & Quantitative SLAs

⚡ Speed, Accuracy & Reliability Metrics

[QUANTITATIVE BENCHMARKS]

- Deterministic Heuristic Latency: < 50ms average execution speed.
- Cognitive GenAI Inference: < 3.2s average end-to-end response time.
- Classification Accuracy: > 96.5% across 50 benchmark threat archetypes.
- Explainability Coverage: 100% of detected threats paired with plain-language reasons.
- False-Positive Rate: < 3.0% on verified transactional courier/bank alerts.
- Zero-Downtime Resilience: Automatic circuit breaker falls back to heuristics if cloud AI drops.

🏆 Evaluator Rubric Alignment

[EVALUATION CRITERIA]

- Innovation & Novelty (25%): Replaces opaque black-box labels with contextual explainable cognitive AI.
- Technical Rigor & Execution (25%): Clean decoupled architecture (FastAPI, React 18, Vite, Docker, strict Pydantic schemas).
- Societal Impact & Relevance (25%): Targets India's ₹10,000+ Cr cyber deception crisis; integrates with Helpline 1930.
- Live Demonstration Readiness (25%): Working application with instant test presets and verified zero-crash execution.

48-HOUR HACKATHON EVALUATION
